Welcome to your network of support

When you or a loved one has been diagnosed with glioblastoma (GBM), there can be a lot to learn in a short amount of time. From disease information to treatment choices and more, it can be hard to know where to begin.

If you’re considering Optune, or are already using it, you are not alone. There are a variety of resources to help answer questions you may have.

Click on the service that you want to learn more about.

Join an Optune Webinar
Connect with other Optune patients and caregivers where you can ask questions and learn from their experience.

Chat with an Optune Buddy
Have a one-on-one chat with someone who has used Optune.

Get 24/7 support
Whether you need to troubleshoot your device in the middle of the night or you need help navigating insurance questions, nCompass® can help.

Selected Important Safety Information

What is Optune® approved to treat?
Optune is a wearable, portable, FDA-approved device indicated to treat a type of brain cancer called glioblastoma multiforme (GBM) in adult patients 22 years of age or older.

Newly diagnosed GBM
If you have newly diagnosed GBM, Optune is used together with a chemotherapy called temozolomide (TMZ) if:

- Your cancer is confirmed by your healthcare professional AND
- You have had surgery to remove as much of the tumor as possible

Recurrent GBM
If your tumor has come back, Optune can be used alone as an alternative to standard medical therapy if:

- You have tried surgery and radiation and they did not work or are no longer working AND
- You have tried chemotherapy and your GBM has been confirmed by your healthcare professional

Please see Important Safety Information throughout, and the Optune Patient Information and Operation Manual at Optune.com/Safety.
Join an Optune® Webinar

If you are interested in learning more, our Optune Webinars are a great place to start. Our webinars give you the chance to hear directly from people who have used Optune. Whether you’ve been recently diagnosed with GBM, are just starting Optune, or are a current user, webinars can be useful at any step in your treatment journey.

There are two to choose from:

**Learn About Optune Webinar**

This webinar is all about getting to know the device, and is best for people who are considering Optune or just starting to use it. Whether you have questions about the device, are curious about integrating Optune into your daily routine, or just want to learn more about how Optune works, this webinar is a great place to begin.

Visit [AboutOptuneWebinar.com](http://AboutOptuneWebinar.com) to register.

The topics covered usually include:

- See how Optune works
- Fitting Optune into your daily routine

**Daily Life with Optune Webinar**

With a focus on how to incorporate Optune into your daily routine, this webinar is best for people who are currently using Optune. Topics can range from sleeping, showering, and traveling with the device to scalp care, managing arrays, and device troubleshooting.

The topics covered usually include:

- Scalp care
- Sleeping and showering with Optune
- Managing arrays and device alarms
- Traveling with Optune

It gives people a place to ask questions.

These webinars are an amazing platform where I can extend that feeling of family to others who are just starting off their journey. There is an entire community that is willing to share their experiences and help guide them through their questions. They didn’t have that sort of thing available when I started out and I am so happy GBM patients have this resource now.

— Taylor, Optune patient

Ready to chat with someone directly? Go to page 3 for more information on Optune buddies.

**Selected Important Safety Information**

**Who should not use Optune?**

Optune is not for everyone. Talk to your doctor if you have:

- An implanted medical device (programmable shunt), skull defect (missing bone with no replacement), or bullet fragment.
- A known sensitivity to conductive hydrogels

Do not use Optune if you are pregnant or are planning to become pregnant.

Connect with an Optune® Buddy

It’s normal to have questions when starting any new treatment, especially a wearable treatment like Optune. That’s why we have Optune Buddies—people who have experience either wearing Optune or caring for someone who does. You can schedule a chat with an Optune Buddy to answer any questions you may have. These one-on-one chats let you focus on the topics that are important to you.* You can schedule one chat, or multiple chats with an Optune Buddy, depending on your needs.

When should I chat with an Optune Buddy?
• When you are considering treatment with Optune and want to learn more
• When you want tips on fitting Optune into your routine
• Whenever you want to speak directly with someone who has experience with Optune

What can I expect from a chat with an Optune Buddy?

Buddies can:
• Answer your questions about life with Optune
• Share ideas for navigating challenges and finding support
• Provide tips for adjusting to Optune
• Tell you about their first-hand experiences

*Scheduled chats are for educational purposes only. The information provided is for general knowledge and is not intended to be medical advice. Consult with your doctor for medical-related questions.

SCHEDULE A CHAT
WITH A BUDDY

Call 1-844-247-1636 or visit OptuneBuddy.com

I encourage people considering Optune to do a Buddy Call.

You can get a wealth of information from people who’ve actually used it. These are people that are going through what you’ve gone through and have an understanding of that and an appreciation that other people don’t.

— Jeanneane, Optune user and Patient Ambassador

Selected Important Safety Information

What are the possible side effects of Optune?
The most common side effects of Optune when used together with chemotherapy (temozolomide or TMZ) were low blood platelet count, nausea, constipation, vomiting, tiredness, seizure, and depression.

Please see Important Safety Information throughout, and the Optune Patient Information and Operation Manual at Optune.com/Safety.
Get support every step of the way with nCompass®

Starting your journey with Optune to treat your GBM reaches many areas of your life. Our nCompass team, available 24/7, is here to help you incorporate Optune into your lifestyle and support you throughout your treatment journey.

After your doctor prescribes Optune, nCompass will:

- Call you to discuss next steps and answer your questions
- Work with your insurance plan and identify resources that may help minimize your cost
- Set up delivery of Optune and provide training to you and your caregivers

During treatment with Optune, nCompass is one call away to:

- Set up additional Optune training at any time if you need it
- Provide tips and resources on how to make Optune a part of your daily life
- Answer questions about how Optune works and its possible side effects
- Troubleshoot any technical issues
- Reorder supplies, such as arrays and extra batteries, or request other equipment
- Offer travel tips and resources
- Provide support and answer questions 24/7

We turn to nCompass when there is an issue with Optune we can’t solve on our own.

nCompass helped us by making sure that we always had the equipment we needed, and they made us feel confident in our ability to manage Optune on our own. The nCompass team answered all our questions, laughed with us, and rolled with our family’s coping methods.

— Andrea, Optune caregiver

Selected Important Safety Information

What are the possible side effects of Optune (con’t)?
The most common side effects when using Optune alone were scalp irritation (redness and itchiness) and headache. Other side effects were malaise, muscle twitching, fall, and skin ulcers.

Talk to your doctor if you have any of these side effects or questions.

Please see Important Safety Information throughout, and the Optune Patient Information and Operation Manual at Optune.com/Safety.
**Important Safety Information**

**What is Optune® approved to treat?**
Optune is a wearable, portable, FDA-approved device indicated to treat a type of brain cancer called glioblastoma multiforme (GBM) in adult patients 22 years of age or older.

**Newly diagnosed GBM**
If you have newly diagnosed GBM, Optune is used together with a chemotherapy called temozolomide (TMZ) if:
- You have had surgery to remove as much of the tumor as possible
- Your cancer is confirmed by your healthcare professional **AND**

**Recurrent GBM**
If your tumor has come back, Optune can be used alone as an alternative to standard medical therapy if:
- You have tried surgery and radiation and they did not work or are no longer working **AND**
- You have tried chemotherapy and your GBM has been confirmed by your healthcare professional

**Who should not use Optune?**
Optune is not for everyone. Talk to your doctor if you have:
- An implanted medical device (programmable shunt), skull defect (missing bone with no replacement), or bullet fragment. Optune has not been tested in people with implanted electronic devices, which may cause the devices not to work properly, and Optune has not been tested in people with skull defects or bullet fragments, which may cause Optune not to work properly
- A known sensitivity to conductive hydrogels (the gel on the arrays placed on the scalp like the ones used on EKGs). When Optune comes into contact with the skin, it may cause more redness and itching or may rarely cause a life-threatening allergic reaction

Do not use Optune if you are pregnant or are planning to become pregnant. It is not known if Optune is safe or effective during pregnancy.

**What should I know before using Optune?**
Optune should only be used after receiving training from qualified personnel, such as your doctor, a nurse, or other medical staff who have completed a training course given by Novocure®, the maker of Optune.
- Do not use any parts that did not come with the Optune Treatment Kit sent to you by Novocure or given to you by your doctor
- Do not get the device or transducer arrays wet
- If you have an underlying serious skin condition on the scalp, discuss with your doctor whether this may prevent or temporarily interfere with Optune treatment

**What are the possible side effects of Optune?**
The most common side effects of Optune when used together with chemotherapy (temozolomide or TMZ) were low blood platelet count, nausea, constipation, vomiting, tiredness, seizure, and depression.

The most common side effects when using Optune alone were scalp irritation (redness and itchiness) and headache. Other side effects were malaise, muscle twitching, fall and skin ulcers. Talk to your doctor if you have any of these side effects or questions.

**Please visit Optune.com/Safety for the Optune Instructions For Use (IFU) for complete information regarding the device’s indications, contraindications, warnings, and precautions.**
